The Julian yeare beginneth the first of January
 The Gregorian begins the 22 of our Decemb.
 The Church of England, in Law-cases, Marc. 25
 The yeare of the Kings reigne, March 27
 The states of Florence, Siences, and Pisa, Mar. 25
 The Empire (as the Julian) the first of January
 The church of Rome, on their 25 of December
 The Egyptians and Persians the 18 of our July
 The Arabians, and most people of Asia, September 13.
 The Hebrews, Greeks, Sarazens, and Turks, 12 mon. Lunar.
 The Tropicall (or true Solar yeare) beginneth at the
 Vernal equinox, and contains 365 dayes, 5 hour. 50 min.
 The Sydereall or Starry yeare, beginneth when the sunne
 is with the first stazze of Aries, of 365 dates, 6 hour, 6 min.

The month } Solar, is the continuance of the sunne in one signe.
 } Of Apparition, is 28 dates, or foure weeks.
 } Of Paragracion, is 27 dates and 8 houres.
 } Of Consecucion, is from new moon to new moon.
 } For use of money, is according to the kalender.

A week hath the name in latine Septimania, or seven
 mornings; yet we commonly call it 7 nights; or in brief, a
 seavnight.

The week beginneth on sunday morning, about mid-
 night; so that our sunday is the first day of the week, called
 Dies Dominicus; the Lords day.

A day Artificiall is the time betwixt sunne-rising and
 sunne-setting; and the night from sunne-set to sunne-rise.

A day Naturall is the time of 24 houres, the beginning
 whereof with us in England, & the Romanes, is at midnight.

The Athenians at sun-setting. The Babylonians at sun-
 rising. The Umbrians and Astronomers at noon.

Peregrine Rivers. 1630.

The Description of the foure Quarters of this present Yeare, 1630.

First of the Winter Quarter.

The winter quarter (according to the motion of the sunne) began the eleventh day of December, in the last yeare (viz. 1629.) At which time the sunne entered into the first minute of Capricorn, he being then in his greatest south destination from the Equinoctiall line, viz. 23 degrees and one half. He being then 47 degrees more southerly from us, -then he will be the eleventh day of June next ensuing. By reason whereof, the daies artificiall, viz. from sunne-rising to sunne-setting, with us will then be at the longest, which now are at the shortest: And what length our night now is, of the same length shall our day then be, that is, to us at Cambridge 16 houres and 34 minutes. And to thole at Edenborough in Scotland, the same day is seventeen houres, and two third parts of an houre, viz. seventeen houres, and 40 minutes.

This quarter continueth untill the tenth day of March, the sunne, during this time, having his naturall motion in passing through these three signes, Capricorn, Aquarius, and Pisces.

In the which time, continuing the space of 89 daies, 56 minutes, the length of the day with us will be increased 4 houres 34 minutes; and to the 11 of June 9 houres & minutes: which (by an equall division of this quarter) giveth for every 22 daies and a quarter, the daies increase to be one houre; which the vulgar people account 15 daies to one houre. But (by reason of the obliquitie of the Equinoctiall, the motion of the sunne, and chiefly the great obliquitie of the whole Sphaere, in this our Latitude of 52 degrees & 17 minutes)

minutes) the increase of the length of the dayes is as followeth, that is, from the eleventh of December to the fifteenth of Januarie, containing 34 dayes, the day is increased one houre.

From the 15 of Januarie to the 2 of February, containing 18 dayes, the day is increased one houre.

From the second of February to the seventeenth, containing 15 dayes, the day is increased one houre.

From the 17 of February to the third of March, containing 14 dayes, the day is increased one houre.

From the third of March to the 19, containing 16 dayes, the dayes increase one houre.

From the 19 of March to the third of April, containing 16 dayes, the dayes increase one houre.

From the third of April to the 19, containing 16 dayes, the dayes increase one houre.

From the 19 of April to the 7 of May, containing 18 dayes, the dayes increase one houre.

And from the 7 of May to the 8 of June, containing 33 dayes, the dayes increase one houre. Whatsoever further you desire for the length of every day, with the time of sun-rise and set; you shall finde in the Kalender, without respect of the refraction of the sunne, which is different both for time and place: therefore here I willingly omit it.

The Spring Quarter.

The tenth day of March, the Sunne entreth into the first point of the Equiptique, being the same point which crosseth the Equator, then making 12 houres day, and 12 houres night throughout the world. And this time is accounted to be the beginning of our Spring; from which time untill the 13 of September, the dayes are longer then the nights: yet this quarter continueth no longer then the dayes are increasing in length, viz. untill the 11 day of June. This quarter continueth the time of the Sunnes progress

gasse through these three signes, viz. Aries, Taurus, and Gemini, containing the space of 92 dayes, 3 houres, and 59 minutes; which is foure dayes, three houres, and three minutes longer then the winter quarter.

The Summer Quarter.

The eleventh day of June, the sunne entreteth into the first solstitiall point of Cancer, beginning then our summer, causing then the fruits of the earth to grow towards their ripening. And this is to all those that inhabite on the northside of the Equinoctiall line, their longest Artificiall day; and to all on the southside, their shortest day.

This quarter continueth untill the 13 day of September, during which time, the sunne declineth towards the Equator, which is the time of the sunne his period through these three signes, Cancer, Leo, Virgo, containing the space of 93 dayes, 14 houres, and 25 minutes. Which is 4 dayes, 13 houres, and 29 minutes longer then the winter quarter, and 10 houres 16 minutes longer then the spring quarter.

The Autumnall Quarter.

The 13 day of September, the sunne entreteth into the autumnall Equinoctiall point, making again the day and night artificiall of one equall length.

This quarter continueth untill the 11 day of December, the sunne declining to his southern Tropique; in which time, containing 89 dayes, 10 houres, and 56 minutes, he moveth through Libra, Scorpio, and Sagittarius.

The use of those Numbers in the *Columnne or space in this Almanack, in every Moneth of this yeare, 1630.*

In the seventh columnne (or space) in eue ry moneth in this Almanack you shall finde the houre and minute of the sunne-setting for every day. The use is thus: Double the houzes and minutes of the sunnes setting, and you haue the length of the same day. Again, take the houzes and minutes of the sunnes setting out of twelve houzes, and that which remaineth is the time of sun rising: which being doubled is the length of the same night.

So haue you } *The length of the day*
 } *The length of the night* } every day in the
 } *The time of Sun-rise* } yeare.
 } *The time of Sun-set* }

Obserue this plain and generall rule,

As } many minutes the Sunne } riseth before 4 | 5 | 6 | 7 | 8 | 9 |
 So } setteth after 8 | 7 | 6 | 5 | 4 | 3 |

And so the contrarie: for,

As } many minutes the Sunne } setteth after 3 | 4 | 5 | 6 | 7 | 8 |
 So } riseth before 9 | 8 | 7 | 6 | 5 | 4 |

which two numbers of sunne-rise, and sunne-set, make 12 houres.

When the Days 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | hour. long.
 Then the Night 16 | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |

And so contrarie: for the length of day and night make 24 ho.

Concerning the minutes, remember this alwaies, that

Threescore	} minutes do make	one houre.
Fortyfive		three quarters.
Fortie		two third parts.
Thirtie		halfe an houre.
Twentie		one third part.
Fifteen		one quarter.

Thele are so plain, that Example needeth not.

Of Elections Medicinall.

The body of man is daily subject to diseases and infirmities, and requireth great care and diligence to be had in conserbing and keeping the health thereof.

Therefore have I serd on these principall rules for bleeding, purging, bathing, and sweating, wishing they may be used as necessarie requireth; especially, upon such daies as (according to their severall administrations) are noted in these rules of Election following.

In { Bleeding
Purging
Bathing
Sweating } consider if you } to keep health,
minister } to cure diseases,

First, if to keep the bodie in health, then

Respect the state of the bo- die for these 4 things,	{ 1 Age	{ Pouth. Mans=state. Age. Decrepit age.	{ 2 Con- stitution	{ 3 Groines. Leannes.										
					{ 2 Com- plexion	{ Hot and dry. Hot and moist. Cold and dry. Cold & moist.	{ 4 Time of the year	{ Spring, best. harbest mean. Summer too hot. Aut. too cold						
									{ 1 2 4 36 48 60	{ 2 4 36 48 60	{ 1 2 4 36 48 60	{ 3 4 36 48 60	{ 4 1 2 3 4	{ 5 1 2 3 4

The bodie very grosse, or very lean, bleed not.

To order the bodie before bleeding.

A Preparative to direct the humours, (by the counsel of a Physician) ought to be receibed three times at the least before a vein be opened: but if time do not permit this, then a Clister would be used the night before. And then open a vein in the morning fasting, an houre or two after sunne-rising, and draw such a quantitie as shall be thought fit by a skilfull Physician,

Respect also must be had to these quantities of blood, according to the complexions of the Patients: v. z.

Those that are	{	Melancholique	{	may bleed	{	most of all.
		Sanguine		lesse then they.		
		Cholerick		lesser.		
		Phlegmaticque		least of all.		

After bleeding may be permitted a draught of Clarret wine with a rosie: and use meats of a light digestion untill the third day, during which time,

Refrain from	{	Riding.	{	and	{	Running.
		Leaping.		Haulting.		
		Wrestling.		Fencing.		
		Tennis.		Houling.		
		Bathing.		Uenis.		

¶ To order the Bodie that shall purge.

Let the Patient receive a preparative (according as the nature of the humours to be purged shall require) three, four, or five dayes before he purge: and not walk into the aire upon the day of purging, untill the medicine have wrought the full operation.

¶ To order the Body after purging.

This is left to the skilfull opinion of him that ministrereth; for sometimes the body falleth into a strange Symptoma; therefore the Physician ought not to be absent, untill he be sure that all dangers are past.

¶ Of Bathing.

The moon in { Libra, or Pisces, bath for cleanlinesse.
Aries, Leo, or Sagit. bath grosse bodies.
Cancer, Scorpio, or Pilces, bath dry bodies.

After bathing dry the body with hot clothes, and lie in a bed with clean sheets an houre or two.

¶ Of Sweating.

Use the same order as in bathing, &c.

Secondly

Secondly, if the body require medicine to cure diseases, then consider these rules following, viz.

In the body, the { Age
Complexion } of the sick patient.
Strength }

In the disease, the { Beginning
Augmentation } either { uniberfall.
State present } particular.
Declination }

Also consider the { Nature of the disease to be cured.
Quality of the medicine that cureth.
Operation manuell and externall.
Administration medicinall and internall }

These and such like duly obserbed, then proceed according to art; as time will permit, the disease require, and the body endure.

Not waiting for the choken { moneths
dayes } lest delay cause
houres } further perill.

Alwayes remembring that you giue no purging medicine when the moon is in Leo: nor open a vein, or make incision, when the moon is in the signe that ruleth over that member where that operation is to be done.

Elections of Husbandry.

Plant and graft the moon increasing in Taurus, or Aquar.
Fell Timber from Lammas till Christmas,) increasing
Fell Coppice and fwell, the moon in the first Quarter.

Cut your vines, in February or March.

Weld cattell, the moon in Aries, Sagittarius, or Capricorn.

Remove trees, the moon in the last quarter of November.

Shear sheep, and cut hayre, the moon increasing.

Gather fruit, Herbs, and flowers, at the full moon.

The wind being east or north-east, it is not good to plant to graft, or cut any trees or plants, whereof you expect any good.

A plain Description of the High-waies
in *England* and *Wales*, now the second time
enlarged, in a more perfect manner then here-
tofore hath been published, with the use of
the same by Example, viz

From *Cambridge* to *London* 44 miles, thus accounted :

¶ From *Cambridge* to *Fulmire* 6 miles, from *Fulmire* to *Barkway* 6 miles, from *Barkway* to *Puckridge* 7 miles, from *Puckridge* to *Ware* 5 miles, from *Ware* to *Waltham* 8 miles, from *Waltham* to *London* 12 miles. And the next numbers do shew how farre it is from any of those Townes (by the way) to *London*. As from *Fulmire* to *London* 38 miles, from *Barkway* 32, from *Puckridge* 25, from *Ware* 20, and from *Waltham* 12 miles. The same order holdeth throughout these Tables.

From <i>Cambridge</i>		m.	44	From <i>Cambridge</i>		m.	52

What

What man is now but doth desire to count,
 If commings in or layings out surmount?
 Within this Table plain it doth appeare,
 Thy daily charge to cast each Moneth and Yeare.

By the Day.	By the Moneth, or 28 dayes.	By the Yeare, 365 dayes.
1 Pennie	2 shil. 4 d	1 Poun. 10 sh. 5
2	4 8	3 0 10
3	37 0	4 11 3
